Positioner-Pro EXLT-FW & FLTLT-FW *The Perfect C-Arm Table*

Nurse Friendly — Patient Friendly — Physician Friendly

STANDARD FEATURES (included with table)

Motorized Motions **FLTLT-FW**

Height adjustment (nominal 10" of travel, 33" low to 43" high)

Lateral Roll (L and R) (nominal 12 - 15 degrees)

Trendelenburg & reverse Trendelenburg tilts (nominal 12 - 15 degrees)

Extend-retract – head to foot travel (nominal 12") - obtain the perfect fluoro view within seconds, minimizing the movement of the C-Arm

Side-to-Side transverse top (nominal 8") travel allows for 4-way powered "floating" top regardless of tilt orientation.

Motorized Motions **EXLT-FW**

Height adjustment (nominal 10" of travel, 29" low to 39" high)

Lateral tilt (nominal 12 - 15 degrees)

Trendelenburg & reverse Trendelenburg tilts (nominal 12 - 15 degrees)

Extend-retract – head to foot travel (nominal 12") - extend-retract functions regardless of tilt orientation, minimizing the movement of the C-Arm

Rectangular shaped radiolucent carbon-fiber composite top

Chamfered radiolucent edge treatment

96" L x 22" W with cantilevered 48" metal free imaging area

Unobstructed floor clearance beneath imaging area

Additional under table clearance for Cranial/Caudad angulations of C-Arm

400 pound distributed patient weight capacity [\[see below\]](#)

Wireless and wired hand-held motion control

Deluxe table top pad (nominal, medical grade vinyl over high density foam)

Padded safety strap

Electrical Specifications: Max Amps 12.5 – Intermittent, 60HZ – 120 VAC

Table Base Dimensions: 29" x 48"

Overall Table Dimensions: 29" x 98"

Overall Table Weight **FLTLT-FW**: 1250 lbs

Overall Table Weight **EXLT-FW**: 1100 lbs

AVAILABLE ACCESSORIES AND OPTIONS

MEDeStealth™ Rail Clamp System – two 6" clamps attach anywhere along the length of cantilevered imagining area

SCATTER-BAN™ radiation safety accessory

Rectangular / Bottleneck Facial Access Top and Pad cutout at head end of top and pad

Foot Pedal Motion Control - replaces wired hand-held remote

What does the Morgan table weight rating mean?

Morgan MEDesign medical procedure tables are built to the standards set by Canadian Standards Association (CSA), one of the most rigorous rating/testing services in the world. In order for Morgan MEDesign to rate its tables at 400 lbs distributed weight the table must support two and one-half times its rated weight (in this case 1,000 lbs) in all articulations.

With a built in six hundred pound safety factor Morgan tables can support a 500+ lbs patient when the patient is properly distributed on the table. When comparing the weight capacity of Morgan tables to our competitors, note the rating/testing services being utilized and definition being used for weight rating. You'll see that Morgan tables will equal or exceed our competitor's weight claims using the definitions that our competitors utilize.
